Senior Technical Product Manager with 18+ years driving enterprise-scale platform transformations at Amazon, Fortune 500 financial institutions, and global retail organizations. Published researcher (7 papers, 7 original frameworks) and U.S. patent holder. Track record of delivering \$91M+ in measurable impact across permission systems, license management, survey platforms, payment modernization, and data architecture — managing cross-functional teams across the US, India, and Australia.

PROFESSIONAL EXPERIENCE

Senior Product Manager, Technical

Seattle, WA

PERU — Unified Permission System & Bedrock/Person Domain (2025 – Present)

- Leading PERU (Permission Engine Re-architecture & Unification) — enterprise-wide authorization platform consolidating fragmented permission systems across Jobs, Interviews, Profiles, Assessments, Offers, and Documents into a single policy-driven engine handling **100M+ daily authorization requests**
- Driving migration from legacy permission frameworks to Cedar policy language with enterprise-wide compliance, observability, and anomaly detection
- Architecting DynamoDB-based permission store with **sub-millisecond latency** for real-time authorization decisions
- Managing **20+ cross-team dependencies** including PDP, Hiring Hub, Interviewer Roster, and Recruiting Hub integrations
- Leading PEMS (Profile Management Exclusion System) — fraud detection platform enabling recruiters to block bad actors and prevent security-flagged candidates from advancing in the hiring pipeline
- Driving Project Cremini — Whole Foods Market TA integration impacting **100,000+ WFM associates** across US, Canada, and UK, including branding, legal entity ingestion, and automated employee identification
- Managing Consolidated Profile Experience (CPS) — eliminating duplicate candidate profiles across Amazon Hire to enable recruiters to take actions without profile fragmentation
- Owning product strategy for GDPR-compliant candidate permission controls, rehire eligibility detection, DSR data deletion automation, and candidate feedback access exception workflows
- Coordinating **7+ concurrent intake streams** across WSTAP, ITA, and cross-functional TA teams

SLIM — Software License & IT Asset Management Platform (2024 – Present)

- Architected and launched SLIM (Software License & IT Management), an enterprise platform delivering **\$77M in annual cost savings** through automated software license tracking, compliance, and optimization
- Led product strategy for StoneGate integration — vendor onboarding and 3P software lifecycle management
- Designed self-service workflows reducing license procurement cycle time by **40%**
- Built real-time dashboards for software spend visibility across all Amazon organizations
- Drove Atlassian tool consolidation strategy and on-call operations framework for Enterprise Service Delivery
- Defined and tracked OKRs for license compliance across multiple business units
- Managed cross-functional stakeholder relationships with Finance, Legal, and Procurement teams
- Led quarterly business reviews presenting cost savings metrics and optimization recommendations to VP-level leadership
- Established automated alerting and reporting workflows for license expiry and compliance violations

FieldSense — Enterprise Survey & Feedback Platform (2022 – 2024)

- Led product management for FieldSense, Amazon's enterprise survey platform that displaced Qualtrics and scaled to **111+ internal teams**
- Drove BBA (Buy with Prime / Business Assurance) delivery optimization generating **2,860 basis points GMS growth**
- Designed and delivered GDPR-compliant data handling including survey data deletion, privacy controls, and EU data residency
- Built Seller Central integration enabling FieldSense surveys for Amazon's 3P seller ecosystem
- Authored comprehensive user stories, API documentation, and data classification frameworks
- Conducted end-user interviews across **4+ organizational segments** to validate product-market fit
- Managed distributed engineering teams across US and India for sprint planning, backlog prioritization, and release coordination
- Championed 3P Gen AI initiatives within EE-Swat team for intelligent survey analysis and automated insights generation

- Defined and executed go-to-market strategy for enterprise-wide rollout, achieving 111+ team adoption within 18 months

East Brunswick, NJ

TD Bank — Technical Program/Product Manager (May 2016 – Apr 2022)

- Led delivery of multiple concurrent programs (Core Banking, API Platform, and Microservices Transformation) serving wholesale and digital banking channels at TD Bank
- Developed replacement strategy for aging legacy platforms with a new consolidated Omni-Channel payment platform
- Created cohesive strategy ensuring FSDM (Financial Services Data Model) and Open API Framework compliance; built the path toward externalizing APIs for partner ecosystem
- Led the SAFe transformation in Payments portfolio — aligned Payments release train with scaled agile principles achieving cost reduction, improved quality, and accelerated code deliveries
- Drove technology decision-making during platform selection (buy vs. build), technical architecture design, and data migration strategy
- Led product and development teams across multiple middleware and API frameworks: IFX, REST, GraphQL, Web Services
- Coached leaders and teams to organize around value streams; launched Agile Release Trains (ARTs) and coordinated quarterly PI Planning events
- Managed and mentored Product Management team across US and India geographies
- Worked closely with staffing vendors to identify, interview, and recruit strong technical talent

Nike — Technical Program/Product Manager (Feb 2015 – May 2016)

- Managed global team of **20+ resources** including development engineers, testing leads, data leads, and business analysts
- Collaborated with architecture team to drive proof of concept for Microservices adoption — first implementation in the business unit, enabling replacement of costly legacy infrastructure
- Led the Analytics Delivery team in Nike North America — designed Analytics Dashboard providing unified Actuals vs. Forecast view across all business lines
- Created design and delivery strategy for consolidated online Dashboard transforming data from internal reports and external agencies into point-in-time Inventory and Financial views
- Managed offshore and onsite delivery of the Enterprise Product Catalog Online Transformation Program from inception to delivery
- Provided strategic direction through gap analysis, ROI analysis, cost-benefit analysis, and solution options spanning people, process, and technology
- Coordinated cross-functional dependencies across Nike's global retail, e-commerce, and supply chain organizations
- Established data governance framework for retail analytics ensuring data quality and consistency across business units
- Delivered stakeholder presentations to VP-level leadership on analytics roadmap and platform modernization strategy

Suncorp Bank, Australia — Principal Consultant / Product Owner (Jan – Sep 2014)

- Delivered the Banking Platform Program (BPP) — replaced the bank's **16 core systems with 5 fully integrated systems** powered by Oracle across a 200-person team
- Led integration strategy sessions with key business and technical stakeholders to determine multiyear platform transformation schedule
- Designed the Core Banking Consulting Roadmap from requirements and analysis perspective
- Led delivery of custom development initiatives in tandem with Oracle migration toward standalone products
- Designed interest calculation bridge component — **still in production 12+ years later**
- Defined **50+ formal integration contracts** across legacy and target systems
- Coached teams in Agile techniques; coordinated quarterly PI Planning events and worked with Release Train Engineers
- Managed cross-continental delivery across Suncorp Australia, Wipro India/Australia, and Oracle India/Australia teams
- Tracked and governed tens of thousands of data attributes during system consolidation ensuring zero data loss

Capital One Auto Finance — Principal Consultant / Agile Coach (Sep 2009 – Dec 2013)

- Delivered multiyear Data Transformation and Redesign Program through four phases: Data Complexity Reduction → Forklift → 3NF Normalization → Operational & Analytical Presentation Layer
- Transformed the organization's data environment from a patchwork of tables and databases to a unified Teradata enterprise data warehouse
- Managed delivery of Auto Loan Sales Reporting Initiative — framework for deducing and aligning dealer incentives from an analytical perspective
- Established the enterprise's first Distributed Agile Teams across US and multiple cities in India — pioneered the **Product-Ahead-of-Tech (PAT)** delivery model
- Played decisive role in customizing Teradata design to fit BI requirements; developed proof of concepts for replacing legacy processes with emerging technologies
- Worked with Agile Coaches to design, develop, and execute strategies engaging stakeholders in behavioral change adoption
- Managed team of Business Analysts, Developers, and Data Modelers distributed across US and India
- Led Basel compliance data architecture ensuring regulatory reporting accuracy for consumer auto lending portfolio
- Established data quality frameworks and automated validation processes reducing data discrepancies by significant margins

Dish Network — Associate Consultant / Product Owner (Mar – Sep 2009)

- Delivered the Enterprise Product Catalogue — organization-wide data structure in application-consumable format serving as unified source for call center applications and web-based ordering tools
- Managed delivery of SOA service candidates designed to serve business purposes in conjunction with IT capabilities
- Defined product requirements and acceptance criteria for enterprise catalog services
- Coordinated with architecture team on service-oriented integration patterns
- Facilitated user acceptance testing with call center stakeholders
- Created data mapping documentation for legacy-to-new catalog migration
- Managed vendor relationships for third-party catalog data integration
- Led sprint ceremonies including planning, demos, and retrospectives
- Delivered training and documentation for call center users on new catalog platform

Target — Associate Consultant / Product Owner (Feb 2008 – Mar 2009)

- Created Prescriber and Prescription Modules of the Online Pharmacy Application replacing legacy system
- Delivered the Data Conversion program providing mechanism for all required operational and compliance data migration
- Interfaced with business and technical teams on strategic approach for pilot and application rollout
- Defined product backlog and prioritization for pharmacy application modules
- Coordinated with regulatory compliance team ensuring HIPAA and pharmacy regulation adherence
- Led cross-functional requirements gathering sessions with pharmacists, IT, and business stakeholders
- Managed defect triage and resolution process across development and testing teams
- Created user acceptance test plans and facilitated UAT cycles with pharmacy operations team
- Documented system integration specifications for pharmacy data feeds and external prescription verification services
