Professional Summary

Senior Technical Product Manager with over 18 years of progressive experience driving enterprise scale digital transformation at Amazon, Fortune 500 financial institutions, and global technology organizations. Currently leading product strategy for the enterprise talent acquisition platform (Amazon HIRE) that processes recruitment for Amazon's 1.5+ million global workforce, the second largest private employer in the United States. Drove the product side of a unified authorization platform replacing two legacy permission systems, with client migration completed in October 2026. Grew an enterprise survey platform from a basic workplace safety tool to a competitive alternative to Qualtrics, now serving 111+ internal teams with GDPR certification. Across a career spanning three continents, shipped recruiter launches in 2026 that cut clicks by 46 to 58 percent, turned 30 to 60 minute email fixes into a sub minute self service change, and reduced standing impersonation access by 56 percent.

Author of 7 peer reviewed research papers published across SSRN, ResearchGate, and Zenodo, contributing to the body of knowledge in enterprise technology, data architecture, distributed agile delivery, and IoT innovation for assisted living. Holder of a filed U.S. Patent (Application No. 19/309,078, 20 claims) for an RFID based personalized reminder system designed to improve care quality for elderly residents in assisted living facilities. Certified Scrum Professional (CSP) with experience leading cross continental teams across the United States, India, and Australia. Previously delivered API modernization replacing 300+ legacy services, core banking platform consolidation replacing 16 systems with 5 unified modules, and omni channel payment platform unification at a Top 10 North American bank.

Professional Experience

Amazon — Senior Product Manager, Technical

April 2022 to Present | Seattle, WA → New Jersey (Remote)

Amazon HIRE: Enterprise Talent Acquisition Platform, Person Domain (2025 to Present)

- Own product strategy and roadmap for the Person Domain within Amazon HIRE, the enterprise hiring platform that processes recruitment for Amazon's 1.5+ million global workforce
- Drove the product side of the unified authorization platform replacing two legacy permission systems (HPS and HPRE), validated in production shadow mode before cutover; client migration completed in October 2026, and authored the Self Service Permissions BRD targeting a 90 percent reduction in access request tickets
- Managed cross team dependencies across Person Domain Platform, Hiring Hub, Interviewer Roster, and Recruiting Hub, coordinating concurrent intake streams across WSTAP, ITA, and cross functional talent acquisition teams
- Contributed to the design of the fraud candidate detection platform integrating Security Profile System APIs to surface fraud risk scores and risk levels, enabling recruiters to identify, flag, and block bad actors from advancing in the hiring pipeline
- Addressed a 2,310% increase in fraudulent employment applications since 2023 with approximately 6,000 fraudulent applications in 2025 alone, protecting hiring ecosystem integrity at national scale
- Delivered three Person Detail Page launches in 2026: Person Pool View (pool membership and add to pool without leaving the profile), Social Links editing with a migration of about 2,400 misfiled links, and Multi field Update cutting clicks to complete mandatory fields from 26 to 14 (46 percent) for Global Specialty Recruiters and from 12 to 7 (58 percent) for other recruiters
- Initiated the Whole Foods Market talent acquisition integration affecting 100,000+ associates, defining 6 concurrent workstreams including Branding Updates, Legal Entities Ingestion, Applicant Record Transfer, Employee Identification, Paradox Workday Integration, and Candidate Feedback Permissions

- Authored the rehire eligibility detection BRD, designing how HIRE would consume the Person Duplicate Check Service and Duplicate Profile Discovery Service to close a gap where 50.9% of rehire candidates were not identified until after offer acceptance (22,638 rehire candidates in 2025), then transitioned the project to a new owner
- Designed comprehensive audit logging and notification system addressing critical findings from the December 2025 RED Team security audit, contributing to elevating 15 critical permission control applications to RED RING 1 retail level security standards
- Delivered the spoofing notification system on the committed Q1 2026 date, which surfaced a real conflict of interest case within weeks (COE 413212); then decoupled spoofing from admin roles, reducing users with standing spoofing access by 56 percent (304 to 133) in October 2026; contributed to a broader 487 Story Weight security initiative across the Hiring System Domain, elevating 41 HR PII data handling applications to RED RING 2 classification
- Led the consolidated profile experience initiative to eliminate duplicate candidate profiles across Amazon HIRE, designing profile consolidation strategy leveraging AlterEgo and duplicate profile detection services
- Owned product strategy for GDPR compliant candidate data management including Data Subject Request deletion automation, Prospect Data Deletion Compliance, and candidate feedback access exception workflows across the Person Domain
- Drove Profile Consolidation for Global Specialty Recruiters, redesigning the approach after a Principal Engineer flagged account takeover risk and taking it through Legal, Privacy and Security review; launched August 2026, turning 30 to 60 minute support ticket email fixes into a change made in under 60 seconds, and authored COE 406970
- Led RC Group Consolidation for 4,270+ users: archived inactive scheduling groups from a base of 10,947 in one launch (October 2026) with admin only creation, undo, audit log and a request workflow, unblocking the 2026 regional queue consolidation

Software License Intelligence and Management Platform (2024 to 2025)

- Led product strategy for an enterprise platform automating software license tracking, compliance monitoring, and cost optimization across Amazon's global operations, with the platform projecting $77M in potential cost savings in 2025
- Designed self service workflows reducing license procurement cycle time by 40%, enabling teams to acquire and manage software licenses without manual procurement intervention
- Built real time dashboards providing software spend visibility across all Amazon organizations, enabling data driven decisions on license utilization and vendor consolidation opportunities
- Led product strategy for vendor onboarding and third party software lifecycle management, streamlining the intake and assessment process for new software tools across the enterprise
- Drove Atlassian tool consolidation strategy, identifying redundant license allocations and establishing an on call operations framework for license management support
- Defined the compliance monitoring architecture ensuring all software deployments met security review, legal contract, and accessibility requirements before provisioning
- Established automated license reclamation workflows identifying unused or underutilized licenses and recovering them for reallocation, contributing to significant annual cost avoidance
- Coordinated with Legal, Security, HR Privacy, and Accessibility teams to define unified compliance requirements for enterprise software onboarding

Enterprise Engineering: FieldSense, Integration Hub, AI Threat Modeling, Secure Messaging, Survey Consolidation (2022 to 2025)

- Transformed FieldSense from a basic workplace safety survey tool into a competitive enterprise survey platform, positioning it as Amazon's internal alternative to commercial survey solutions (Qualtrics) and scaling adoption to 111+ internal teams; unique surveys grew from 93K to 480K and survey makers from 38K to 134K, at about 89 percent lower cost per user than the commercial alternative
- Conducted market research and analyzed Gartner publications to identify feature gaps, then developed a comprehensive product roadmap addressing enterprise needs including anonymous and non anonymous responses (111 teams), survey deletion (70 teams), image and file integration (56 teams), mandatory questions (31 teams), and graph/PDF exports (20 teams)
- Identified critical data model limitations for hierarchical survey routing and proposed a graph database approach replacing simple if else logic, extending the data model with a tree based structure while maintaining backwards compatibility
- Grew the Slack support community from 600 to 1,729 users, creating a self sustaining community where 70% of new questions were answered within 2 hours, driving a 60% reduction in basic support tickets through a two tier support model
- Led encryption implementation and granular access controls to achieve GDPR certification, enabling FieldSense to handle sensitive data for the Black Business Accelerator program which exceeded 2023 SPS Goal by +6.0% and achieved 240

basis points favorable to goal in 2024

- Led the Integration Hub as Product Manager and TPM, a compliance platform unifying four review types (Security, Legal, HR Privacy, Accessibility) for IT Shop, where only 529 of 20,000+ productivity applications were listed and 417 lacked security reviews; took the Phase 1 design through security review into implementation
- Defined the Phase 1 design with engineering: a compliance data store refreshed every 6 hours, APIs for IT Shop and the vendor onboarding portal, and an approval decision matrix, with targets of 1,000 concurrent requests at 99.9 percent availability and security reviews shortened from 3 months to 1.5
- Targeted software request abandonment reduction from 95% to under 20% by unifying fragmented compliance systems (TPS, Talos, ASCAD, Contract Central, UBX, SIM) into a single compliance platform
- Developed an AI powered threat modeling tool that automates security assessment of third party SaaS and on premises software, launched and used by several teams to generate threat models that helped complete security reviews, drafting threat models in under 30 minutes against a 12 to 16 week manual onboarding cycle
- Led the BYOAI initiative establishing a framework for safe adoption of third party AI capabilities across third party productivity applications, starting with Asana's native AI capabilities including smart status updates, smart summaries, and smart goals
- Designed the vision for complex cross tool AI workflows spanning Q, Asana, Outlook, and Salesforce, enabling automated task creation from emails and AI powered project updates across platforms while maintaining strict security and compliance standards
- Built configurable reporting APIs satisfying 90% of enterprise reporting use cases, eliminating the need for custom report development for most teams
- Drove the final phase of consolidating 300+ standalone Qualtrics instances onto the enterprise instance with SSO, restarting stalled migrations (including Ring) and migrating 17 newly discovered instances at no added vendor cost ahead of the June 2024 contract deadline
- Co owned the migration of about 5,700 senior leaders from Wickr DayOne to AWS Wickr: drove the security review to AppSec sign off (July 2024), built the migration plan, and wrote the FAQ and S Team and company wide communications; launched April 2025 to about 14,000 registered accounts, recognized with an A to Z Shout Out

Wipro Technologies — Senior Manager, Product Management

Client: TD Bank (Top 10 North American Bank) | May 2016 to April 2022 | Mount Laurel, NJ

- Led the enterprise wide API transformation initiative replacing over 300 legacy IFX based web services with modern REST and Open API compliant endpoints, significantly improving system performance, maintainability, and scalability across US and Canada operations
- Designed and delivered a custom API orchestration layer streamlining end to end workflows such as credit card application processing, providing measurable gains in latency, modularity, and reusability across channels
- Created the FSDM (Financial Services Data Model) and Open API Framework compliance strategy, building the path toward externalizing APIs for partner ecosystem integration and third party developer access
- Developed the replacement strategy for legacy payment platforms with a consolidated omni channel payment platform unifying online bill pay, peer to peer transfers, Interac e Transfer, and cross border payments into a cohesive API driven platform
- Replaced legacy batch processing systems with real time payment capabilities, implementing an API gateway architecture handling millions of daily transactions across web, mobile, ATM, and branch channels
- Led SAFe transformation in the Payments portfolio, aligning release trains with scaled agile principles, achieving cost reduction, improved quality metrics, and accelerated delivery cadence across multiple product teams
- Launched Agile Release Trains (ARTs) and coordinated quarterly PI Planning events with 100+ participants across business and technology stakeholders for the payments and digital banking domains
- Drove technology decision making during platform selection (buy vs. build analysis), technical architecture design, and data migration strategy for core banking and payment modernization initiatives
- Led delivery teams across multiple middleware frameworks including IFX, REST, GraphQL, and legacy Web Services, ensuring consistent API standards and governance across all integration points
- Managed and mentored a product management team distributed across the United States and India, establishing cross continental collaboration patterns and delivery cadence
- Established API governance standards and developer documentation practices that enabled downstream teams to integrate with modernized services without requiring direct support from the platform team
- Delivered quarterly business reviews to Director and VP level stakeholders, presenting roadmap progress, technical debt reduction metrics, and platform adoption dashboards

Wipro Technologies — Senior Manager, Product Management

Client: Nike, Inc. | February 2015 to May 2016 | Beaverton, OR

- Managed a global team of 20+ resources including engineers, testers, data leads, and business analysts delivering technology programs for one of America's most iconic retail brands
- Led the proof of concept for microservices adoption, the first microservices implementation in the business unit, establishing architectural patterns and best practices for the organization's transition from monolithic systems
- Led the Analytics Delivery team in Nike North America, designing an analytics dashboard providing a unified actuals versus forecast view that enabled data driven decision making across the product catalog and demand planning functions
- Delivered the Enterprise Product Catalog Online Transformation Program from inception to delivery, unifying disparate data systems spanning product catalog management, demand planning, and global retail operations into a cohesive decision support platform
- Introduced the Enterprise Retail Technology Architecture (ERTA) framework for consolidating fragmented retail data ecosystems while maintaining operational continuity across multinational operations spanning Nike's global markets
- Established Tableau based business intelligence dashboards providing real time visibility into product performance, inventory levels, and regional sales metrics across North American operations
- Coordinated with Nike's global technology teams to ensure platform scalability and alignment with enterprise standards for data integration, security, and performance benchmarks
- Delivered end to end program management including requirements gathering, vendor coordination, UAT planning, production deployment, and post launch stabilization across all workstreams
- Managed stakeholder communication across business leadership, technology teams, and offshore delivery centers to ensure alignment on priorities, timelines, and deliverables
- Established agile delivery practices within the analytics team, introducing sprint cadence, backlog grooming, and retrospective processes that improved team velocity by 25%

Wipro Technologies — Senior Product Manager

Client: Suncorp Bank | January 2014 to September 2014 | Brisbane, Australia

- Delivered the Banking Platform Program (BPP) at Suncorp, a leading Australian diversified financial services group, replacing 16 legacy core banking systems with 5 fully integrated Oracle Flexcube modules across a 200 person team spanning Australia and India
- Developed the Integration First Platform Consolidation (IFPC) framework comprising four principles: Integration Contract First Design, System Consolidation Mapping, Attribute Level Dependency Resolution, and Phased Coexistence Architecture
- Led the integration strategy defining how 16 legacy systems would coexist with new Oracle Flexcube modules during the phased migration, ensuring zero disruption to daily banking operations for Suncorp's retail and commercial customers
- Designed a standalone interest calculation bridge component that translated between legacy interest computation methods and the new Oracle Flexcube interest engine, a component that remains in production use over a decade later
- Created the core banking consulting roadmap defining the multi year transformation trajectory, migration sequencing, and risk mitigation strategies for the platform consolidation program
- Managed attribute level dependency resolution across all 16 legacy systems, mapping data flows and integration contracts to ensure complete functional coverage in the consolidated platform
- Coordinated with Suncorp's risk and compliance teams to ensure all regulatory requirements for Australian banking (APRA, ASIC) were met during the platform transition
- Led cross cultural teams spanning Brisbane, Melbourne, and multiple delivery centers in India, establishing communication protocols and escalation paths for a complex multinational program
- Delivered integration testing strategy and execution for the consolidated platform, ensuring data integrity across all migrated customer accounts and transaction histories
- Published the IFPC framework as an original research contribution documenting the methodology for future practitioners undertaking similar core banking consolidation programs

Wipro Technologies — Principal Consultant / Agile Coach

Client: Capital One Auto Finance | September 2009 to December 2013 | Plano, TX

- Delivered a multi year data transformation and redesign program through four phases: Data Complexity Reduction, Forklift Migration, Third Normal Form (3NF) Normalization, and Operational and Analytical Presentation Layer for one of America's largest auto finance companies
- Transformed the enterprise data environment from a complex patchwork of mainframe era flat files, disparate departmental databases, and manual reporting workflows into a unified Teradata based enterprise data warehouse

- Managed the Auto Loan Sales Reporting Initiative developing a framework for deducing and aligning dealer incentives, enabling data driven decisions that supported the American auto lending ecosystem
- Pioneered the establishment of the enterprise's first distributed agile teams across the United States and India, introducing the Product Ahead of Tech (PAT) delivery model that addressed the fundamental challenge of maintaining product vision coherence across 10+ hour time zone differences
- Developed the PAT delivery model with three core principles: Product Definition Sprint, Asynchronous Handoff Protocol, and Cross Continental Retrospective, which improved sprint velocity by 34% across distributed teams
- Validated the PAT framework across 5 organizations in 3 countries, demonstrating its generalizability beyond the originating context and contributing an original methodology to the body of knowledge in distributed agile delivery
- Managed a team of business analysts, developers, and data modelers distributed across the United States and India, establishing behavioral change adoption strategies for cross cultural team management in financial services technology
- Designed Third Normal Form (3NF) data models with Basel II and III compliance integration, ensuring all analytical outputs met regulatory requirements for consumer auto finance risk reporting
- Built ETL pipelines and data validation frameworks ensuring data integrity during the phased migration from legacy systems to the unified Teradata platform, with parallel validation at each migration phase
- Delivered quarterly program reviews to Capital One's technology leadership, presenting data quality metrics, migration progress, and business value realization dashboards
- Established data governance standards and data catalog documentation that enabled downstream analytics teams to self serve from the unified data warehouse without requiring direct support
- Led the operational excellence phase implementing monitoring, alerting, and performance optimization for the production data warehouse supporting daily auto lending operations

Wipro Technologies — Product Manager

Client: Dish Network | March 2009 to September 2009 | Denver, CO

- Delivered the Enterprise Product Catalogue for one of America's largest satellite television providers, creating a unified data structure serving call center applications and web based ordering tools
- Designed the product catalog data model that consolidated fragmented product information from multiple legacy systems into a single source of truth for Dish Network's product and service offerings
- Defined business requirements and user stories for the catalog management interface used by product managers and call center representatives to manage product bundles, pricing, and promotions
- Led the requirements gathering process across business stakeholders, call center operations, and technology teams to ensure the catalog platform addressed operational needs across all customer channels
- Managed the data migration from legacy product databases to the new enterprise catalog, ensuring complete coverage of all active products, services, and promotional bundles
- Delivered UAT coordination and production deployment support, ensuring a smooth transition from legacy catalog systems to the new enterprise platform
- Established documentation and training materials for call center teams transitioning to the new catalog based ordering system
- Coordinated with Dish Network's marketing and pricing teams to ensure catalog flexibility supported frequent promotional campaigns and dynamic pricing strategies

Wipro Technologies — Associate Consultant

Client: Target Corporation | February 2008 to March 2009 | Minneapolis, MN

- Created the Prescriber and Prescription Modules of the Online Pharmacy Application replacing the legacy pharmacy system for one of America's largest retailers, serving millions of Target pharmacy customers across the United States
- Designed data models and business logic for prescription management, prescriber validation, drug interaction checks, and refill management workflows within the online pharmacy platform
- Delivered the data migration program ensuring operational and regulatory compliance for all patient records, prescription histories, and prescriber data transferred from the legacy system
- Defined business requirements and functional specifications for the prescriber module enabling pharmacists to validate prescriptions against a database of licensed healthcare providers
- Coordinated with Target's pharmacy operations team and regulatory compliance team to ensure all system outputs met FDA, DEA, and state pharmacy board requirements for electronic prescription management
- Led user acceptance testing for the prescription and prescriber modules, working closely with pharmacists and pharmacy technicians to validate workflow accuracy and usability

- Managed offshore development coordination between the Minneapolis business team and India based development team, establishing communication protocols for complex healthcare regulatory requirements
- Delivered production support documentation and knowledge transfer materials ensuring the Target pharmacy operations team could independently manage the new platform post launch

U.S. Patent

U.S. Patent Application No. 19/309,078 | Filed: August 25, 2025 | 20 Claims

RFID Based Personalized Reminder Display System for Assisted Living and Senior Care Facilities

A novel IoT system using passive RFID technology to automatically detect elderly residents and display personalized medication schedules, daily tasks, and safety alerts on digital screens in care facility zones. The system supports 500+ concurrent residents across 50+ facility zones with sub second response times and privacy preserving design. Filed as Non Provisional Utility Patent via USPTO Patent Center. Co inventor: Bragadheshwaran Kalyanakrishnan Krishnasamy. Open source reference implementation available on GitHub. Addresses the growing U.S. senior care crisis with 80.8 million Americans projected to be 65+ by 2040 (U.S. Census Bureau).

Education and Certifications

MBA (Finance)
Eastern Kentucky University
Richmond, KY, USA

B.E. (Electronics and Communication)
Hindustan College of Engineering
University of Madras, Chennai, India

Certified Scrum Professional (CSP)
Scrum Alliance
Highest Scrum Practitioner Certification

Technical Expertise

AI / ML / GenAI: Generative AI, AI Powered Recommendation Engines, Automated Insights, NLP, Fraud Detection ML

Architecture: Microservices, REST APIs, GraphQL, SOA, Event Driven Architecture, IFX, Open API Framework

Data and Analytics: Teradata, SQL, Oracle, ETL, Data Modeling, FSDM, 3NF, Tableau, Data Warehousing

Product and Agile: SAFe, Scrum, Kanban, PI Planning, JIRA, VersionOne, Product Roadmapping, OKRs, RICE Prioritization

Leadership: Cross Continental Team Management (US, India, Australia), Vendor Management, P&L Ownership

Security and Compliance: GDPR, DSR, Permission/Authorization Systems, Fraud Detection, RED Team Security

Amazon Platforms: Amazon HIRE, FieldSense, Seller Central, Oracle Flexcube, Teradata, Person Detail Page
